# ULTIMAX 100

THE LIGHTEST  
5.56mm Calibre Machine Gun in the World

The ultimate 5.56mm light machine gun... the lightest squad automatic weapon in the world that meets all modern combat requirements. Designed from the onset for one-man operation, the Ulimax 100 is a gas-operated magazine fed weapon. The Ulimax 100 incorporates a number of significantly outstanding features:

## PATENTED "CONSTANT RECOIL" PRINCIPLE

A revolutionary "Constant Recoil" concept practically eliminates recoil and gives the Ulimax 100 exceptional controllability in automatic fire, better than any existing assault rifle and machine guns.

## ACCURATE AND CONTROLLABLE

The minimal recoil of the Ulimax 100 enables it to be fired accurately in full automation from the hip, or with one arm. The controllability of the Ulimax 100 is also unaffected even when fired with the butt detached, a feature especially useful when space is limited or confined such as in airborne or armoured infantry roles.

## LIGHTWEIGHT

The Ulimax 100, when fully loaded with 100 rounds of ammunition, weighs only 6.8kg, lighter than many other 5.56mm LMG empty.

## FIREPOWER

The combination of lightweight and accuracy leads to a dramatic increase in effective firepower. A saving of ammunition comes with accuracy and the lightness of the weapon also enables the soldier to carry more ammunition.

## QUICK RELEASE BARREL

The Ulimax 100 comes with a quick-change barrel feature. The barrels are pre-zeroed and can be changed quickly by the soldier.

## RELIABLE

A 3-position gas regulator enables the weapon to function reliably even in adverse environment such as jungle, sub-zero and desert conditions.
